Psychographics

Psychographics is a term used to describe the characteristics of people and neighborhoods which, instead of being purely demographic, speak more to attitudes, interests, opinions and lifestyles. PRIZM (Claritas, Inc.) is a leading system for characterizing geographical areas (neighborhoods) and the local workforce into one of 66 distinct market segments based on their demographics (age, education level, income, whether there are children in the household) and consumption habits (what goods they purchase, what type of dining they do, what kind of car they drive, what media they use, where they travel). These segments are classified into four urbanization categories—Urban, Suburban, Second City or Town and Rural—and level of affluence. Characteristics range from urban and very affluent at the high end of the scale to rural and less affluent at the lower end. These characteristics also factor into projections for the demand for various types of goods and services.

Commercial retail developers are interested in understanding a community's psychographic profile, since it is an indication of its residents' propensity to spend across select retail categories. Residential developers are also interested in understanding this profile as it tends to suggest preferences for certain housing product types.
