RE: Remedial Action General Report
Tropical Chevron
2995 Highway 44 (at I-95)
New Smyrna Beach, Florida
FDEP # 64/8517300 / PO # C153EF

Dear Mr. Roberts:

Earth Systems has prepared this *Remedial Action General Report (RAGR)* summarizing the field activities and data collected at Tropical Chevron located in New Smyrna Beach, Florida. Field activities included installation of three monitoring wells and the collection of 24 groundwater samples for laboratory analysis. This report includes a summary of the groundwater analytical results, groundwater flow direction, conclusions, and a recommendation to conduct Natural Attenuation Monitoring (NAM).

SITE HISTORY

The site originally stored petroleum products in underground storage tanks (USTs) located on the northern portion of the site. No data regarding the installation date, contents, use, or date of removal for the original USTs were available. In 1983, three 10,000-gallon tanks used to store unleaded gasoline were installed in a new tank pit located southeast of the original USTs. In May 2009, the 10,000-gallon tanks were replaced with two 15,000-gallon double-walled tanks installed in the same UST pit and remain in service. A site plan illustrating the site layout and monitoring well locations is included as **Figure 1**.

Discharge reporting forms were submitted to FDEP in December 1988 and October 1989 based upon dissolved hydrocarbon compounds detected in the site's compliance wells. Both discharges were deemed eligible for coverage under the Early Detection Incentive program. Contamination assessment activities were initiated by Groundwater Technology, Inc., in November 1991. Ten shallow monitoring wells (MW-5 through MW-14) and three deep wells (PZ-1, PZ-2, and PZ-3) were originally installed at the site to delineate the horizontal and vertical extent of dissolved hydrocarbon impacts. Data collected in 1991 indicated that the shallow plume extended from the original UST pit

eastward onto the adjacent property. Data from the deep monitoring wells indicated that the plume extended downward to at least 44 feet below land surface (ft bls) but did not reach 70 ft bls. Contamination assessment activities were approved by FDEP in August 1992.

A *Remedial Action Plan* (RAP) was prepared for the site in June 1994 by G&E Engineering. The RAP was approved in March 1995 but was not implemented due to the discontinuation of the State of Florida Reimbursement Program. Each of the monitoring wells installed as part of the Reimbursement Program was subsequently abandoned.

Earth Systems became the designated contractor for the site in November 2004 under the State of Florida Preapproval Program. Earth Systems supervised the installation of 17 shallow monitoring wells (MW-1R through MW-17), 15 intermediate-depth monitoring wells (IW-1 through IW-15), and five deep monitoring wells (DW-1 through DW-5) between 2005 and 2010. The monitoring well locations are shown on **Figure 1**.

The monitoring wells were sampled during field events conducted in April 2005, May 2006, January 2007, December 2008, April 2009, February 2010, and December 2010. The assessment activities were summarized in a *Template Site Assessment Report (TSAR)* submitted in July 2005, a *Supplemental SAR* submitted in March 2007, and various *Deliverable Documents*. The analytical data gathered between 2005 and 2010 indicated that soil and shallow groundwater impacts were present on the Tropical Chevron property but did not extend offsite. Intermediate-zone groundwater impacts were present on the Tropical Chevron site and extended eastward onto the two adjacent properties.

Earth Systems submitted a RAP for the site to the FDEP in March 2012. The RAP was approved in June 2012. In accordance with the Task Assignment, Earth Systems implemented the RAP construction activities between February 2013 and April 2013. System startup was performed between April 29, 2013, and May 23, 2013. The remediation system incorporated air sparging (AS) to remove hydrocarbons from the groundwater and soil vapor extraction (SVE) to remove hydrocarbons from the soil. Two AS systems were installed at the site – shallow and deep. The AS/SVE system operated from April 2013 until February 2016, when Earth Systems and FDEP agreed that the system should be shut off while alternative technologies for addressing the remaining impacts were investigated.

A source removal excavation event was completed at the site in November 2017. The source removal was conducted in the original UST pit to remove impacted soil that was not being addressed by the AS/SVE system. Prior to conducting the source removal, monitoring wells MW-1R, DW-1, and sparge well AS-3, which were installed in the source removal area, were properly abandoned by a licensed driller. Following source removal activities, monitoring well MW-1RR was installed in the same general location as well MW-1R.

Post-source removal PARM sampling events were conducted quarterly starting in May 2018 (May 2018, August 2018, November 2018, and February 2019). Groundwater samples were collected from wells MW-1RR, MW-2R, MW-4R, and OW-1 during each event. Analytical results from the four quarterly sampling events indicated no tested compounds were detected above their respective GCTLs in any of the sampled wells, indicating that the November 2017 excavation event was successful in reducing shallow zone groundwater concentrations to below target levels. Therefore, no further action is needed on the onsite shallow-zone plume.

On May 3, 2021, Earth Systems personnel mobilized to the site to oversee Gulf Coast Environmental, LLC (GCE) demolish the system compound, remove the concrete pad, install a well vault, and level the area.

MONITORING WELL INSTALLATION

From June 1 to June 2, 2023, Earth Systems supervised Preferred Drilling Solutions (PDS) during the installation of three monitoring wells (IW-27, IW-28, and IW-29) positioned to delineate the dissolved hydrocarbon groundwater plume. Prior to installing the wells, each location was cleared to 5 ft bls using hand tools to check for utilities. Soil samples were collected every foot to 5 ft bls in each well for field soil screening purposes using the jar head-space method. No elevated OVA readings were encountered at the well locations. **Table 1** summarizes current and historical OVA/PID results.

Once the initial 5 ft of each borehole was cleared, the monitoring wells were installed via Hollow Stem Auger. The monitoring wells were constructed of 2-inch diameter polyvinyl chloride (PVC), installed to a depth of 30 ft bls, and constructed with 10 ft of 0.01-inch slotted PVC well screen. After installation, each well was developed until the purge water was clear. Copies of field notes, monitoring well construction logs, and well completion reports are provided in **Appendix A**.

GROUNDWATER FLOW DIRECTION

On June 8, 2023, Earth Systems personnel mobilized to the site to gauge depth to groundwater in monitoring wells MW-1RR, MW-3R, MW-4R, MW-5R, MW-6R, MW-9R, IW-1, IW-2, IW-7, IW-11, IW-16, IW-17, IW-18, IW-19, IW-20, IW-21, IW-22, IW-23, IW-24, IW-25, IW-26, IW-27, IW-28, and IW-29. Depth to water measurements were not taken from wells MW-8R, MW-10R, and DW-3. Well MW-8R has been abandoned, well MW-10R has been destroyed, and well DW-3 could not be located. Free phase petroleum product was not detected in any of the wells gauged.

The depth to water in the shallow zone ranged from 2.34 feet below top of casing (btoc) in well MW-9R to 6.03 feet btoc in well MW-6R. The depth to water in the intermediate wells ranged from 3.75 feet btoc in well IW-28 to 7.23 feet btoc in well IW-20.

Groundwater flow direction within the shallow zone and intermediate zone was generally towards the southeast, which is consistent with previous interpretations. **Table 2** summarizes current and historical groundwater elevation data. Groundwater elevation contour maps illustrating groundwater flow direction in the shallow and deep zones are provided as **Figure 2A** and **Figure 2B**.

GROUNDWATER ASSESSMENT RESULTS

After gauging depth to water, groundwater samples were collected from monitoring wells MW-1RR, MW-3R, MW-4R, MW-5R, MW-6R, MW-9R, IW-1, IW-2, IW-7, IW-11, IW-16, IW-17, IW-18, IW-19, IW-20, IW-21, IW-22, IW-23, IW-24, IW-25, IW-26, IW-27, IW-28, and IW-29. Purging and sampling were performed in accordance with the current FDEP Groundwater Sampling Standard Operating Procedure 001/01. The collected samples were stored on wet ice and transported to Pace Analytical Services (PACE) under chain of custody seal to be analyzed for one or more of the following: Benzene, Toluene, Total Xylenes, and Methyl-Tert-Butyl Ether (BTEX/MTBE) by EPA Method 8260, Polycyclic Aromatic Hydrocarbons (PAHs) by EPA Method 8270, and Total Recoverable Petroleum Hydrocarbons (TRPH) by the FL-PRO method.

Laboratory analytical results indicated tested compounds were detected above Groundwater Cleanup Target Levels (GCTLs) in the samples collected from monitoring wells MW-1RR, IW-7, IW-20, IW-21, IW-22, IW-23, and IW-27. Groundwater analytical results are summarized in **Table 3A** and **Table 3B** and are presented on **Figure 3A** through **Figure 3C**. Groundwater sampling logs, field notes, and calibration logs are provided in **Appendix A**. A copy of the laboratory analytical report with chain-of-custody is provided in **Appendix B**.

CONCLUSION AND RECOMMENDATIONS

In June 2023, Earth Systems installed three monitoring wells and collected groundwater samples from 24 monitoring wells. Based on the results of these activities and previous investigations, Earth Systems offers the following conclusions:

- OVA/PID responses were 0 parts per million.
- Groundwater flow direction was towards the southeast in the shallow and intermediate zone during the June 2023 sampling event.
- Groundwater analytical results indicated no tested compounds were detected above their respective Natural Attenuation Default Concentrations (NADCs). Tested compounds were detected above GCTLs in the samples collected from monitoring wells MW-1RR, IW-7, IW-20, IW-21, IW-22, IW-23, and IW-27 during the June 8, 2023, sampling event.

- The shallow groundwater plume is located on site and is defined to the north by well MW-2R, to the east by wells MW-3R and MW-5R, to the south by well MW-6R, and to the west by MW-4R.

- The intermediate groundwater plume is primarily located on the adjacent property to the east and is defined to the north by wells IW-24, IW-19, and IW-26, to the east by well IW-28, and to the west by wells IW-1 and IW-11. Results from well IW-27 (located on the southern edge of the plume) indicated Total Xylenes were detected above its GCTL, but concentrations were relatively low and do not warrant an additional delineation well to the south.

- Select PAHs were also detected above GCTLs in well IW-7 only.

Earth Systems recommends transitioning the site into a NAM program to monitor groundwater concentrations. The NAM program should include shallow monitoring wells MW-1RR and MW-5R, and intermediate wells IW-7, IW-17, IW-20, IW-21, IW-22, IW-23, IW-26, IW-27, and IW-28. Samples should be analyzed for BTEX/MTBE and PAHs. This report will be the final deliverable for Purchase Order # C153EF. A new Purchase Order should be issued to continue work at the site. If you have any questions concerning the information presented in this report, please contact the undersigned at (904) 247-0740.

Sincerely,

Luke Russell

All borings installed after March 2005 were screened using a Photo Ionization Detector (PID)

NR = No Recovery

NA = Not Analyzed

FBLS = Feet Below Land Surface

PPM = Parts Per Million

Blank = No data

NA = Not Available

NS = Not Sampled

GCTLs = Groundwater Cleanup Target Levels specified in Table I of Chapter 62-777, F.A.C.

NADCs = Natural Attenuation Default Source Concentrations specified in Table V of Chapter 62-777, F.A.C.

** = As provided in Chapter 62-550, F.A.C.

a = See the October 12, 2004 "Guidance for the Selection of Analytical Methods and for the Evaluation of Practical Quantitation Limits" to determine how to evaluate data when the CTL is lower than the PQL.

Concentrations in bold are above FDEP Target Levels

Project Name	Tropical Chevron	Date	6-1-23
FAC ID #	8517300	Page	1 of 1
Location	2995 Hwy 44 New Smyrna FL	Prepared by	T. Byrnes
Scope of work	Well install	Weather Conditions	80's sunny
Arrival Time	0830	Departure Time	1100

Time	Description of Activities
0630	Prepare for site, check calibration on OVA
0645	Driving light duty truck to site
0830	Arrive, wait for drillers, mark out locations of wells
0900	PDS here, Pedrey here - Box truck and Geoprobe on Flatbed
0935	Setting up on IW-28, will Hand auger 0-5' collecting OVA data to 5', using HSA down to 30' BLS for all wells
1100	IW-28 installed will pad and develope tomorrow
1115	Start IW-27 Post hole to 5' BLS, OVA every 1'
1200	Done with IW-27, Break for lunch
1300	Start IW-29, I moved well location 5' to the North because it looks like original location would be under water during rains, 10' to the south is wet at surface now with no rain, Got the OK from Luke
1415	IW-29 done, will look for wells to sample next week
1530	Can't find MW-8R-10L OR DW-3 using metal detector and probe
1600	Leave site
1730	Home

RE: Project: Tropical Chervon
Pace Project No.: 35805135

Dear Mr. Russell:

Enclosed are the analytical results for sample(s) received by the laboratory on June 08, 2023. The results relate only to the samples included in this report. Results reported herein conform to the applicable TNI/NELAC Standards and the laboratory's Quality Manual, where applicable, unless otherwise noted in the body of the report.

The test results provided in this final report were generated by each of the following laboratories within the Pace Network:

- Pace Analytical Services - Ormond Beach

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Shelby Sharpe

QUALIFIERS

Project: Tropical Chervon
Pace Project No.: 35805135

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

TNTC - Too Numerous To Count

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit - The lowest concentration value that meets project requirements for quantitative data with known precision and bias for a specific analyte in a specific matrix.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Reported results are not rounded until the final step prior to reporting. Therefore, calculated parameters that are typically reported as "Total" may vary slightly from the sum of the reported component parameters.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

ANALYTE QUALIFIERS

I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Compound was analyzed for but not detected.
J(M1)	Estimated Value. Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
L	Off-scale high. Actual value is known to be greater than value given.
MS	Analyte recovery in the matrix spike was outside QC limits for one or more of the constituent analytes used in the calculated result.
