**RE: Natural Attenuation Monitoring Report - Quarterly  
Tropical Chevron  
2995 Highway 44 (at I-95)  
New Smyrna Beach, Florida  
FDEP # 64/8517300  
PO # C31D53 – Task 1**

Dear Mr. Cullen:

Earth Systems has prepared this *Natural Attenuation Monitoring (NAM) Report* summarizing the field activities and data collected at Tropical Chevron located in New Smyrna Beach, Florida. Field activities included the collection of nine groundwater samples for laboratory analysis. This report includes a summary of the groundwater analytical results, groundwater flow direction, conclusions, and a recommendation to continue NAM.

## SITE HISTORY

The site originally stored petroleum products in underground storage tanks (USTs) located on the northern portion of the site. No data regarding the installation date, contents, use, or date of removal for the original USTs were available. In 1983, three 10,000-gallon tanks used to store unleaded gasoline were installed in a new tank pit located southeast of the original USTs. In May 2009, the 10,000-gallon tanks were replaced with two 15,000-gallon double-walled tanks installed in the same UST pit and remain in service. A site plan illustrating the site layout and monitoring well locations is included as **Figure 1**.

Discharge reporting forms were submitted to the Florida Department of Environmental Protection (FDEP) in December 1988 and October 1989 based upon dissolved hydrocarbon compounds detected in the site's compliance wells. Both discharges were deemed eligible for coverage under the Early Detection Incentive program. Contamination assessment activities were initiated by Groundwater Technology, Inc., in November 1991. Ten shallow monitoring wells (MW-5 through MW-14) and three deep wells (PZ-1, PZ-2, and PZ-3) were originally installed at the site to delineate the horizontal and vertical extent of dissolved hydrocarbon impacts. Data collected in 1991

indicated that the shallow plume extended from the original UST pit eastward onto the adjacent property. Data from the deep monitoring wells indicated that the plume extended downward to at least 44 feet below land surface (ft bls) but did not reach 70 ft bls. Contamination assessment activities were approved by FDEP in August 1992.

A *Remedial Action Plan* (RAP) was prepared for the site in June 1994 by G&E Engineering. The RAP was approved in March 1995 but was not implemented due to the discontinuation of the State of Florida Reimbursement Program. Each of the monitoring wells installed as part of the Reimbursement Program was subsequently abandoned.

Earth Systems became the designated contractor for the site in November 2004 under the State of Florida Preapproval Program. Earth Systems supervised the installation of 17 shallow monitoring wells (MW-1R through MW-17), 15 intermediate-depth monitoring wells (IW-1 through IW-15), and five deep monitoring wells (DW-1 through DW-5) between 2005 and 2010. The monitoring well locations are shown on **Figure 1**.

The monitoring wells were sampled during field events conducted in April 2005, May 2006, January 2007, December 2008, April 2009, February 2010, and December 2010. The assessment activities were summarized in a *Template Site Assessment Report* (TSAR) submitted in July 2005, a *Supplemental SAR* submitted in March 2007, and various *Deliverable Documents*. The analytical data gathered between 2005 and 2010 indicated that soil and shallow groundwater impacts were present on the Tropical Chevron property but did not extend offsite. Intermediate-zone groundwater impacts were present on the Tropical Chevron site and extended eastward onto the two adjacent properties.

Earth Systems submitted a RAP for the site to the FDEP in March 2012. The RAP was approved in June 2012. In accordance with the Task Assignment, Earth Systems implemented the RAP construction activities between February 2013 and April 2013. System startup was performed between April 29, 2013, and May 23, 2013. The remediation system incorporated air sparging (AS) to remove hydrocarbons from the groundwater and soil vapor extraction (SVE) to remove hydrocarbons from the soil. Two AS systems were installed at the site – shallow and deep. The AS/SVE system operated from April 2013 until February 2016, when Earth Systems and FDEP agreed that the system should be shut off while alternative technologies for addressing the remaining impacts were investigated.

A source removal excavation event was completed at the site in November 2017. The source removal was conducted in the original UST pit to remove impacted soil that was not being addressed by the AS/SVE system. Prior to conducting the source removal, monitoring wells MW-1R, DW-1, and sparge well AS-3, which were installed in the source removal area, were properly abandoned by a licensed driller. Following source removal activities, monitoring well MW-1RR was installed in the same general location as well MW-1R.

Post-source removal PARM sampling events were conducted quarterly starting in May 2018 (May 2018, August 2018, November 2018, and February 2019). Groundwater samples were collected from wells MW-1RR, MW-2R, MW-4R, and OW-1 during each event. Analytical results from the four quarterly sampling events indicated no tested compounds were detected above their respective Groundwater Cleanup Target Levels (GCTLs) in any of the sampled wells, indicating that the November 2017 excavation event was successful in reducing shallow zone groundwater concentrations to below target levels. Therefore, no further action is needed on the onsite shallow-zone plume.

On May 3, 2021, Earth Systems personnel mobilized to the site to oversee Gulf Coast Environmental, LLC (GCE) demolish the system compound, remove the concrete pad, install a well vault, and level the area. In June 2023, three monitoring wells were installed (IW-27, IW-28, and IW-29), and 24 monitoring wells were sampled. Analytical results indicated tested compounds were detected above GCTLs in the samples collected from monitoring wells MW-1RR, IW-7, IW-20, IW-21, IW-22, IW-23, and IW-27.

## GROUNDWATER FLOW DIRECTION

On February 26, 2024, Earth Systems personnel mobilized to the site to gauge depths to groundwater in monitoring wells MW-1RR, IW-7, IW-17, IW-20, IW-21, IW-22, IW-23, IW-26, and IW-27. Well MW-8R was scheduled to be gauged, but the well has been abandoned and filled with grout. Free phase petroleum product was not detected in any of the wells.

The depth to water in the intermediate wells ranged from 3.31 ft bls in well IW-27 to 6.43 ft bls in well IW-20. Groundwater flow direction within the intermediate zone was generally towards the east, which is consistent with previous interpretations. **Table 1** summarizes current and historical groundwater elevation data. A groundwater elevation contour map for the intermediate zone is provided as **Figure 2**.

## GROUNDWATER ASSESSMENT RESULTS

After gauging depths to water, groundwater samples were collected from monitoring wells MW-1RR, IW-7, IW-17, IW-20, IW-21, IW-22, IW-23, IW-26, and IW-27. Purging and sampling were performed in accordance with the current FDEP Groundwater Sampling Standard Operating Procedure 001/01. The collected samples were stored on wet ice and transported to Eurofins Environment Testing under chain of custody seal to be analyzed for one or more of the following: Benzene, Toluene, Total Xylenes, and Methyl-Tert-Butyl Ether (BTEX/MTBE) by EPA Method 8260 and Polycyclic Aromatic Hydrocarbons (PAHs) by EPA Method 8270.

Laboratory analytical results indicated tested compounds were detected above GCTLs in the samples collected from monitoring wells IW-7, IW-20, IW-21, IW-23, and IW-27.

Groundwater analytical results are summarized in **Table 2A** and **Table 2B** and are presented on **Figure 3A** through **Figure 3C**. Groundwater sampling logs, field notes, and calibration logs are provided in **Appendix A**. A copy of the laboratory analytical report with chain-of-custody is provided in **Appendix B**.

## CONCLUSION AND RECOMMENDATIONS

In February 2024, Earth Systems collected groundwater samples from nine monitoring wells. Monitoring well MW-8R was scheduled to be sampled but has been abandoned. Based on the results of these activities and previous investigations, Earth Systems offers the following conclusions:

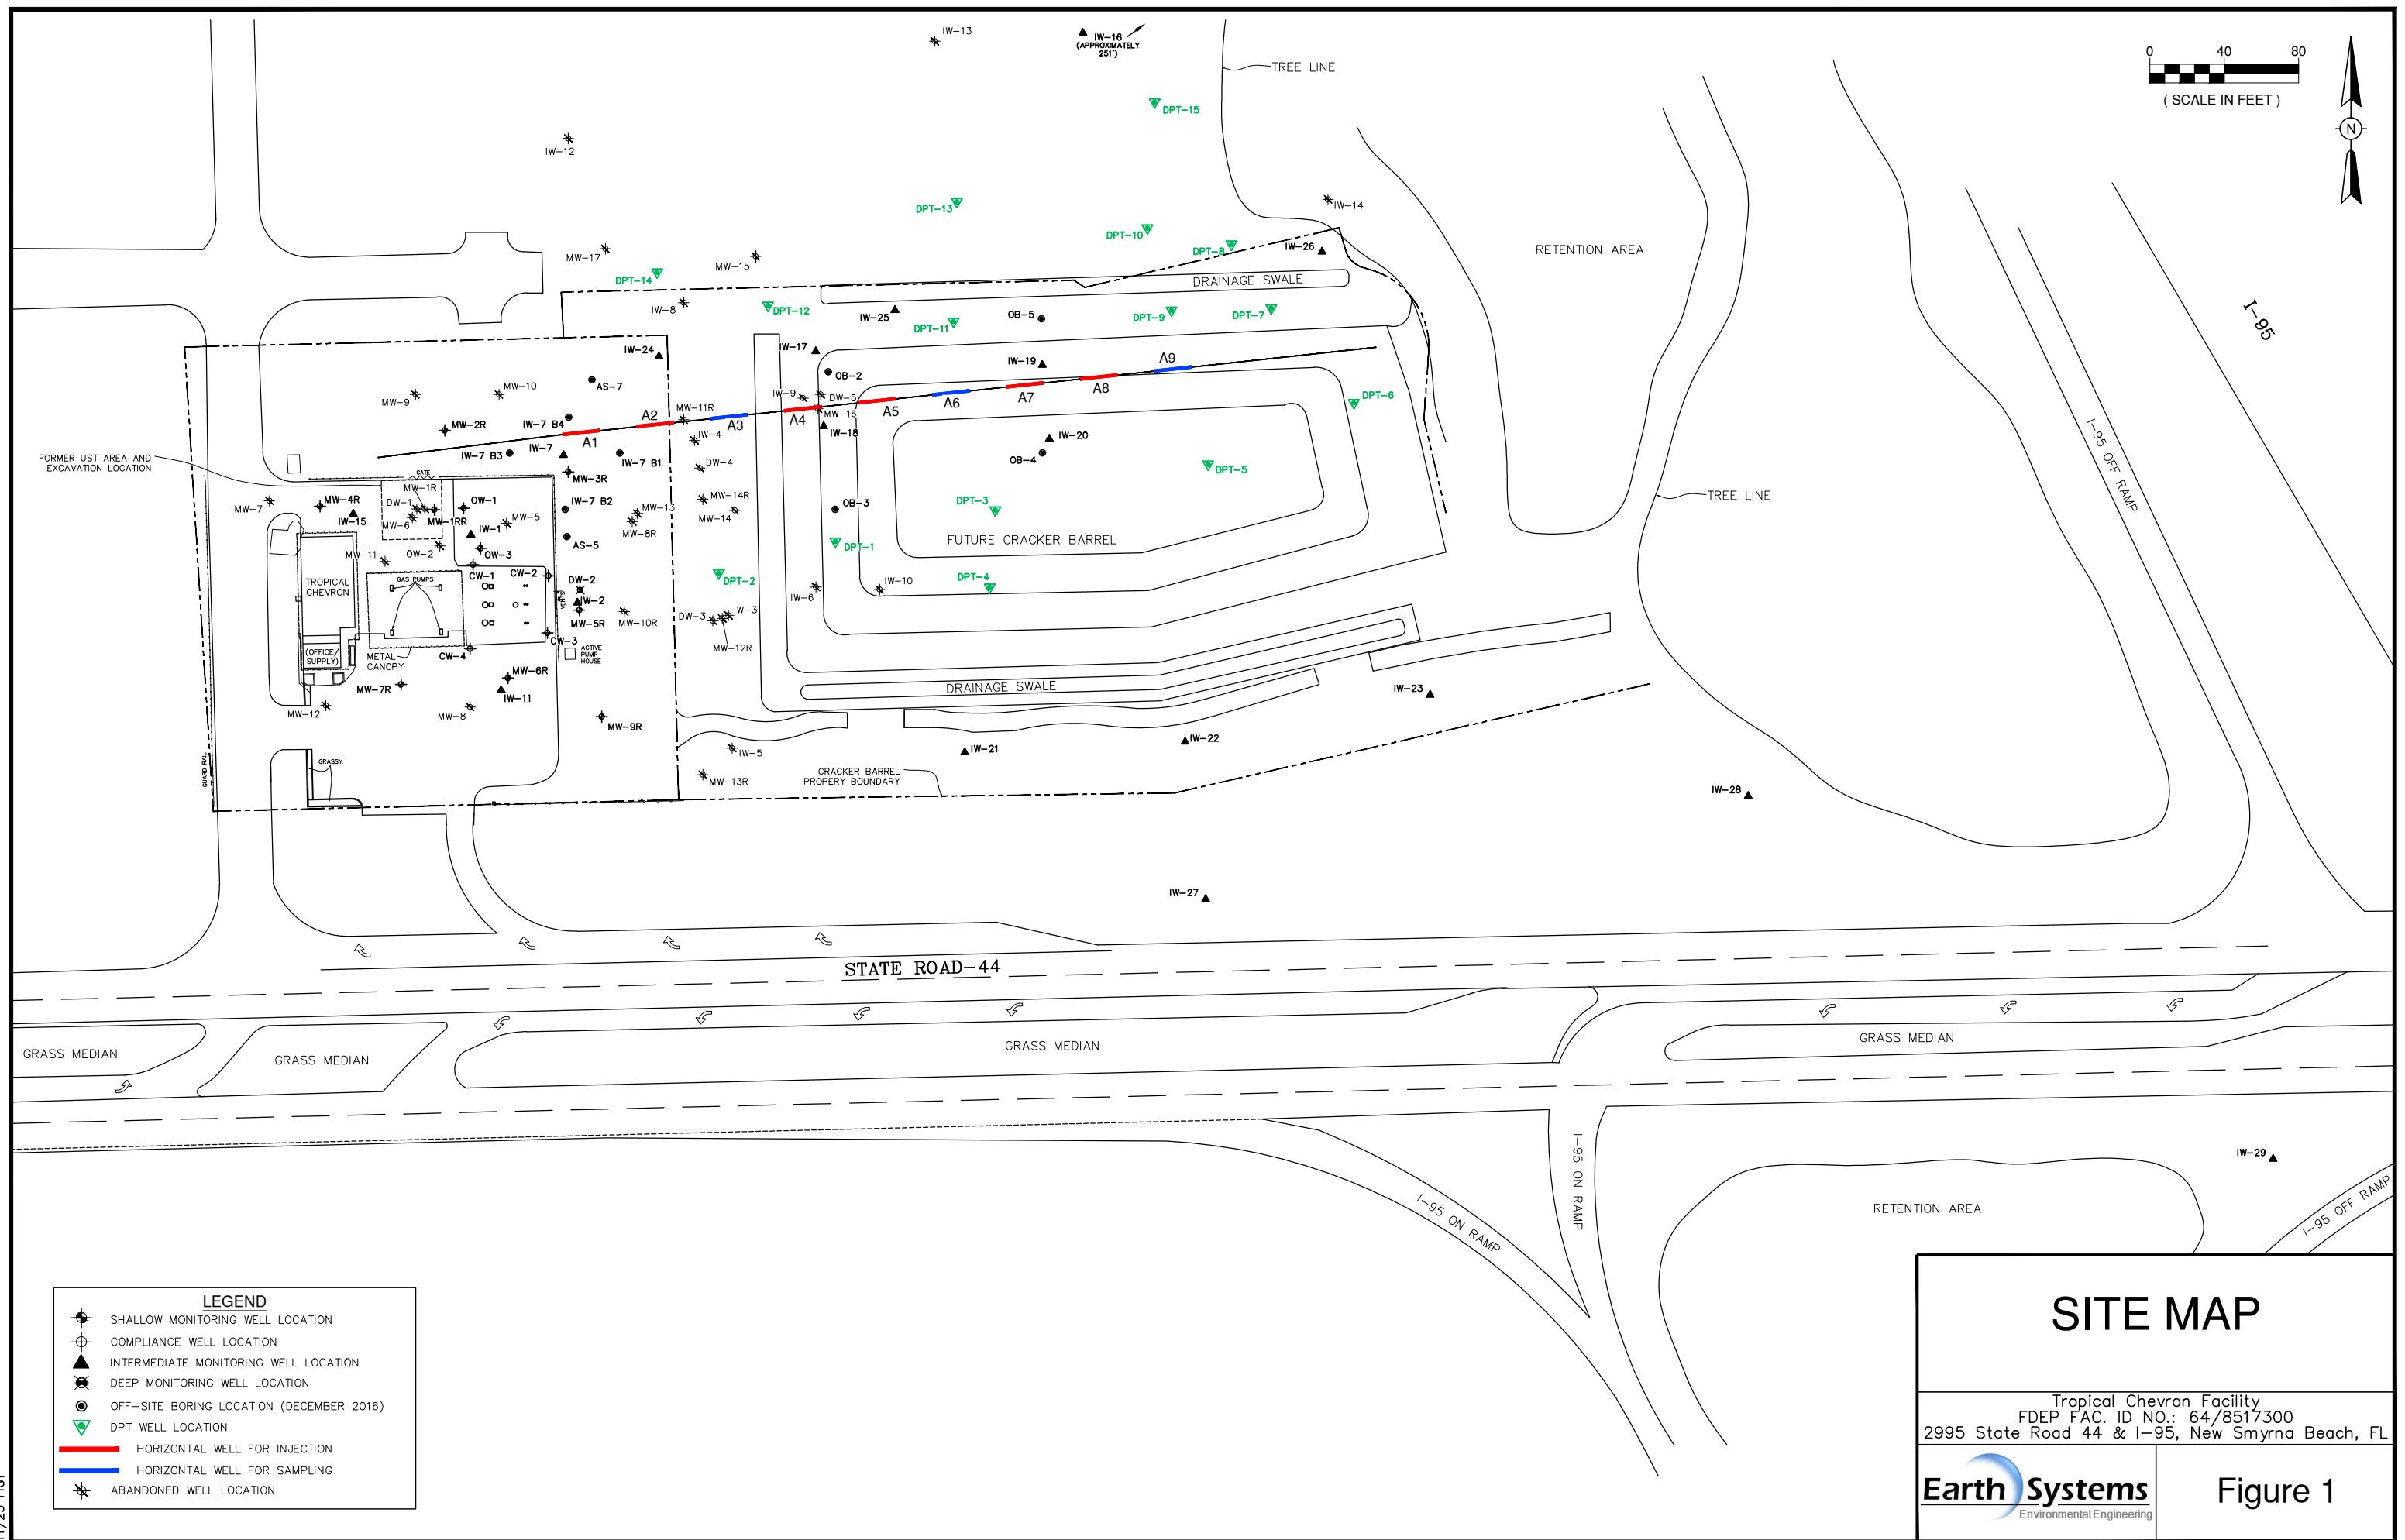

- Groundwater flow direction in the intermediate zone was towards the east.
- Groundwater analytical results indicated no tested compounds were detected above their respective Natural Attenuation Default Concentrations (NADCs). Tested compounds were detected above GCTLs in the samples collected from monitoring wells IW-7, IW-20, IW-21, IW-23, and IW-27.
- The intermediate groundwater plume is primarily located on the adjacent property to the east and is defined to the north by wells IW-25, IW-19, and IW-26, to the east by well IW-28, and to the west by wells IW-1 and IW-11. Results from well IW-27 (located on the southern edge of the plume) indicated Total Xylenes and Benzene were detected above GCTLs, but concentrations were relatively low and do not warrant an additional delineation to the south.
- Select PAHs were also detected above GCTLs in well IW-7 only.

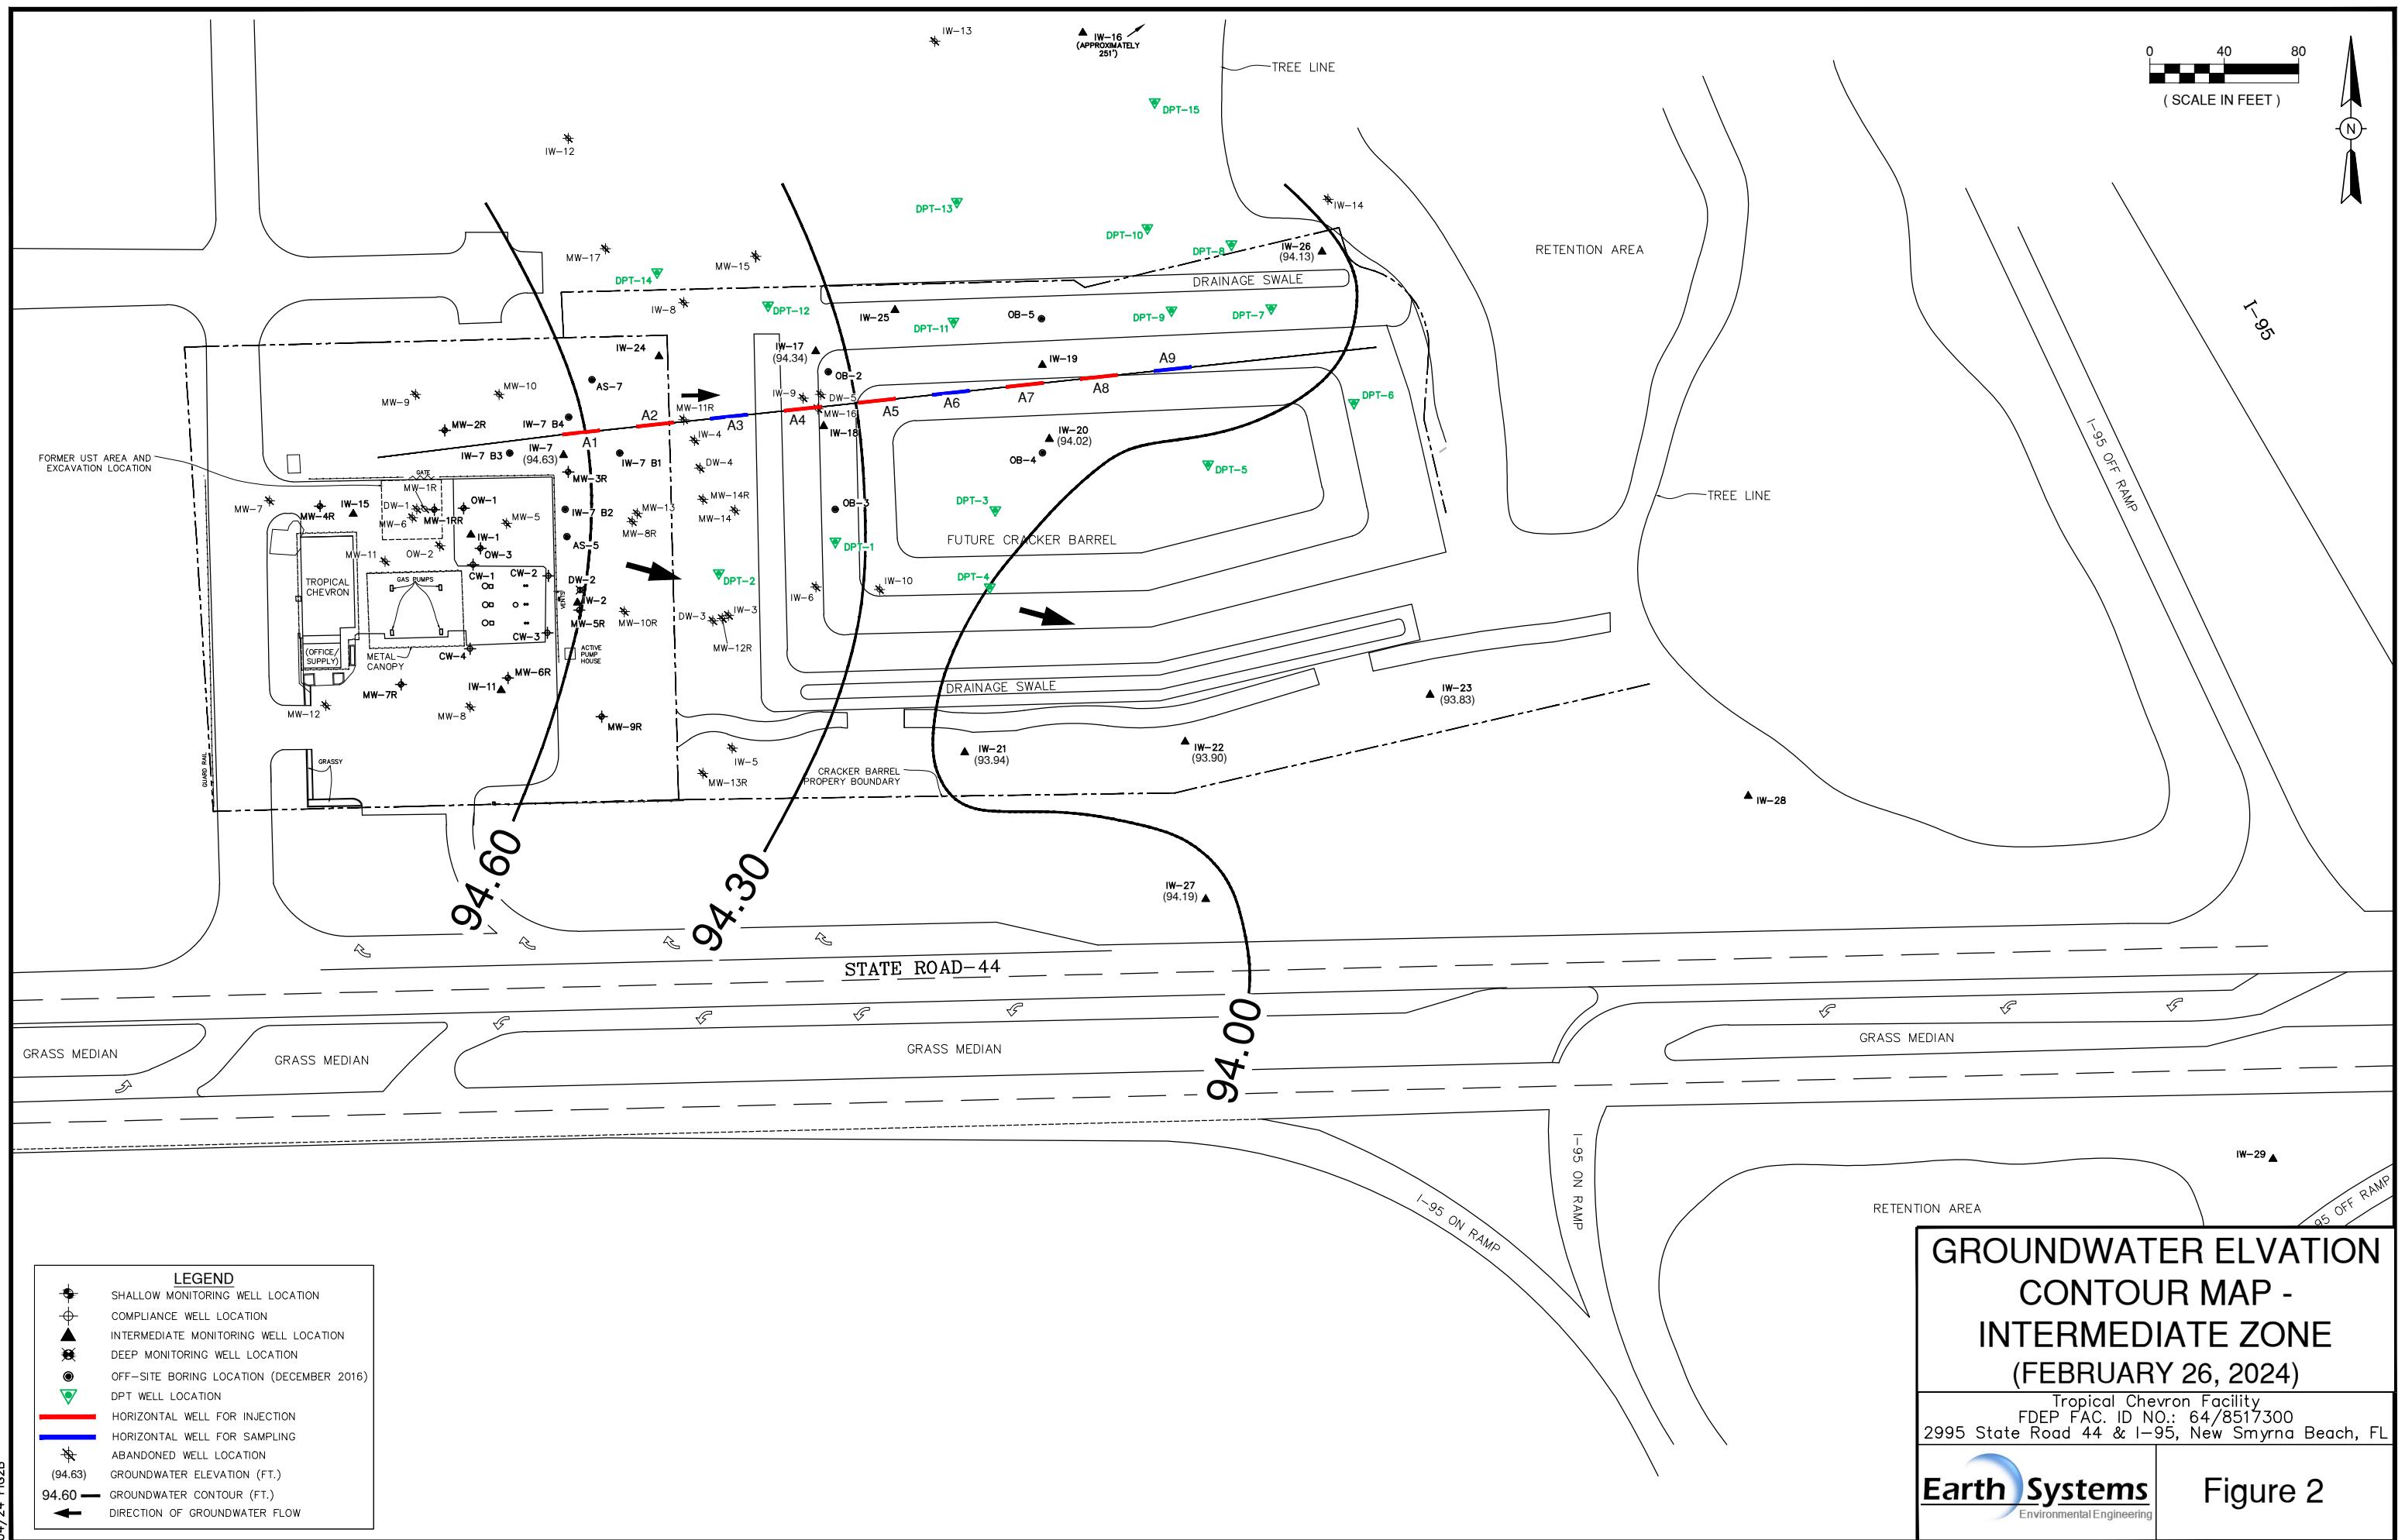

Earth Systems recommends continuing NAM sampling. The next NAM sampling event will be conducted in late May 2024. If you have any questions concerning the information presented in this report, please contact the undersigned at (904) 247-0740.

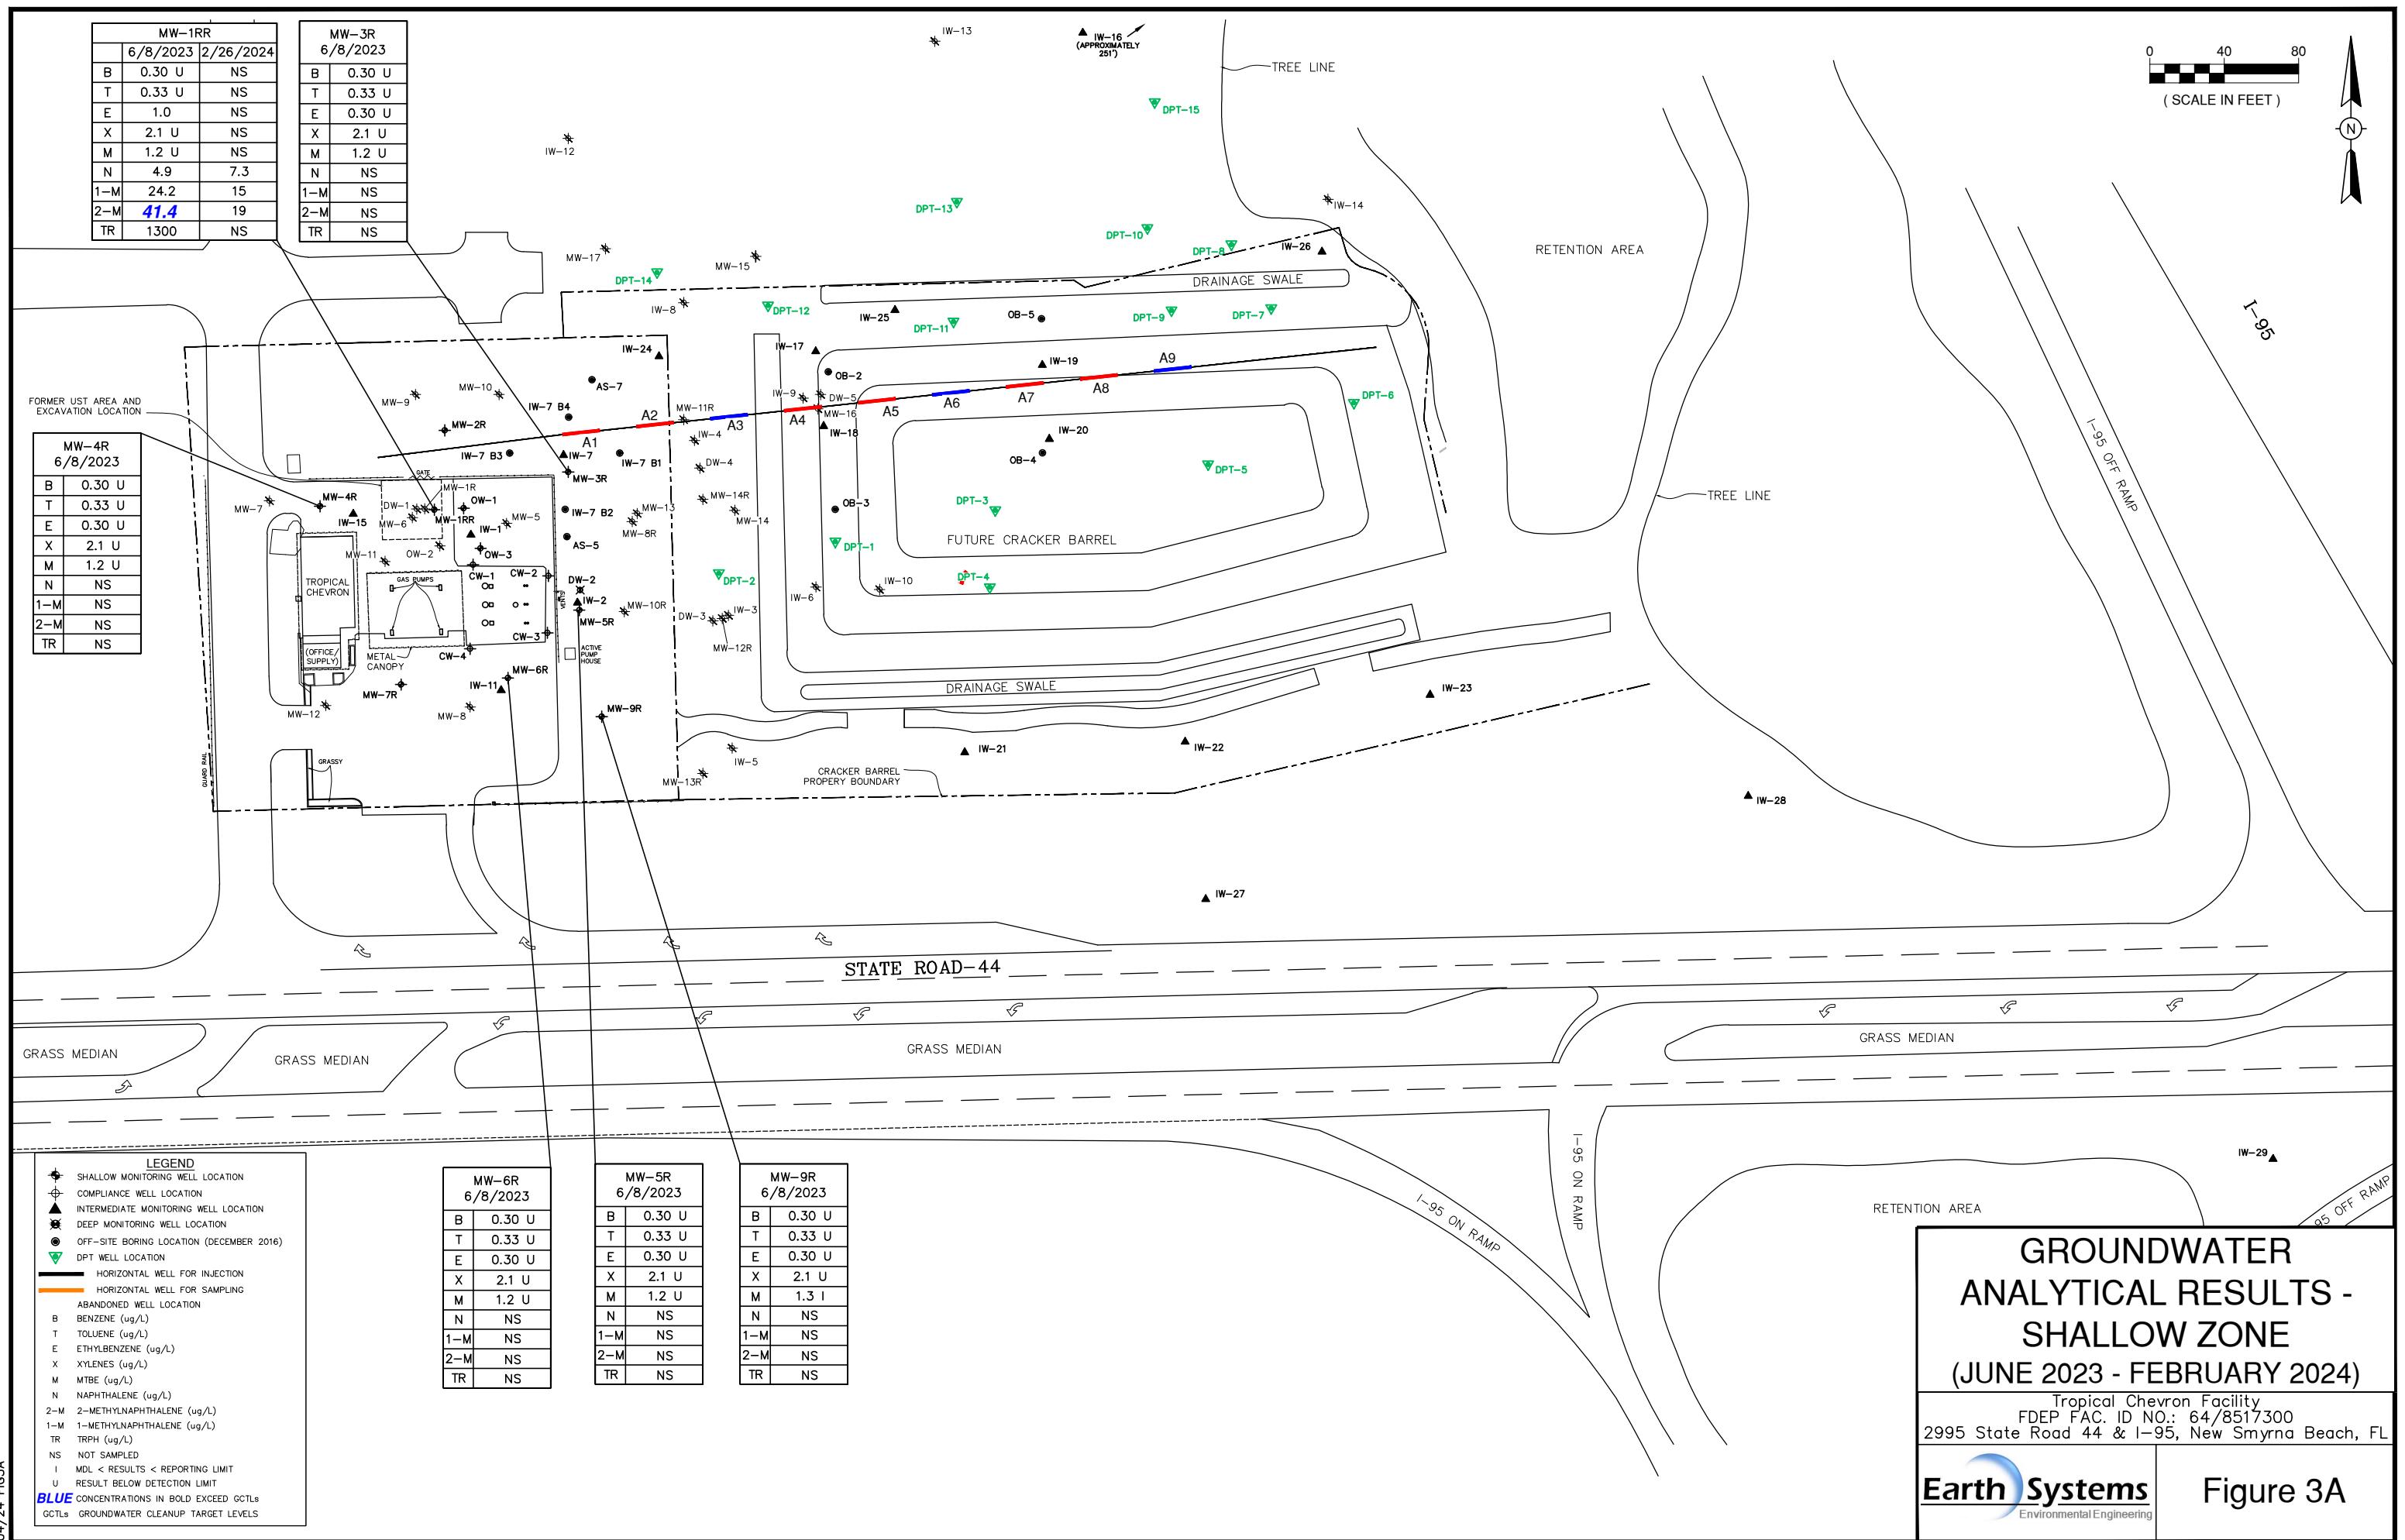

Sincerely,

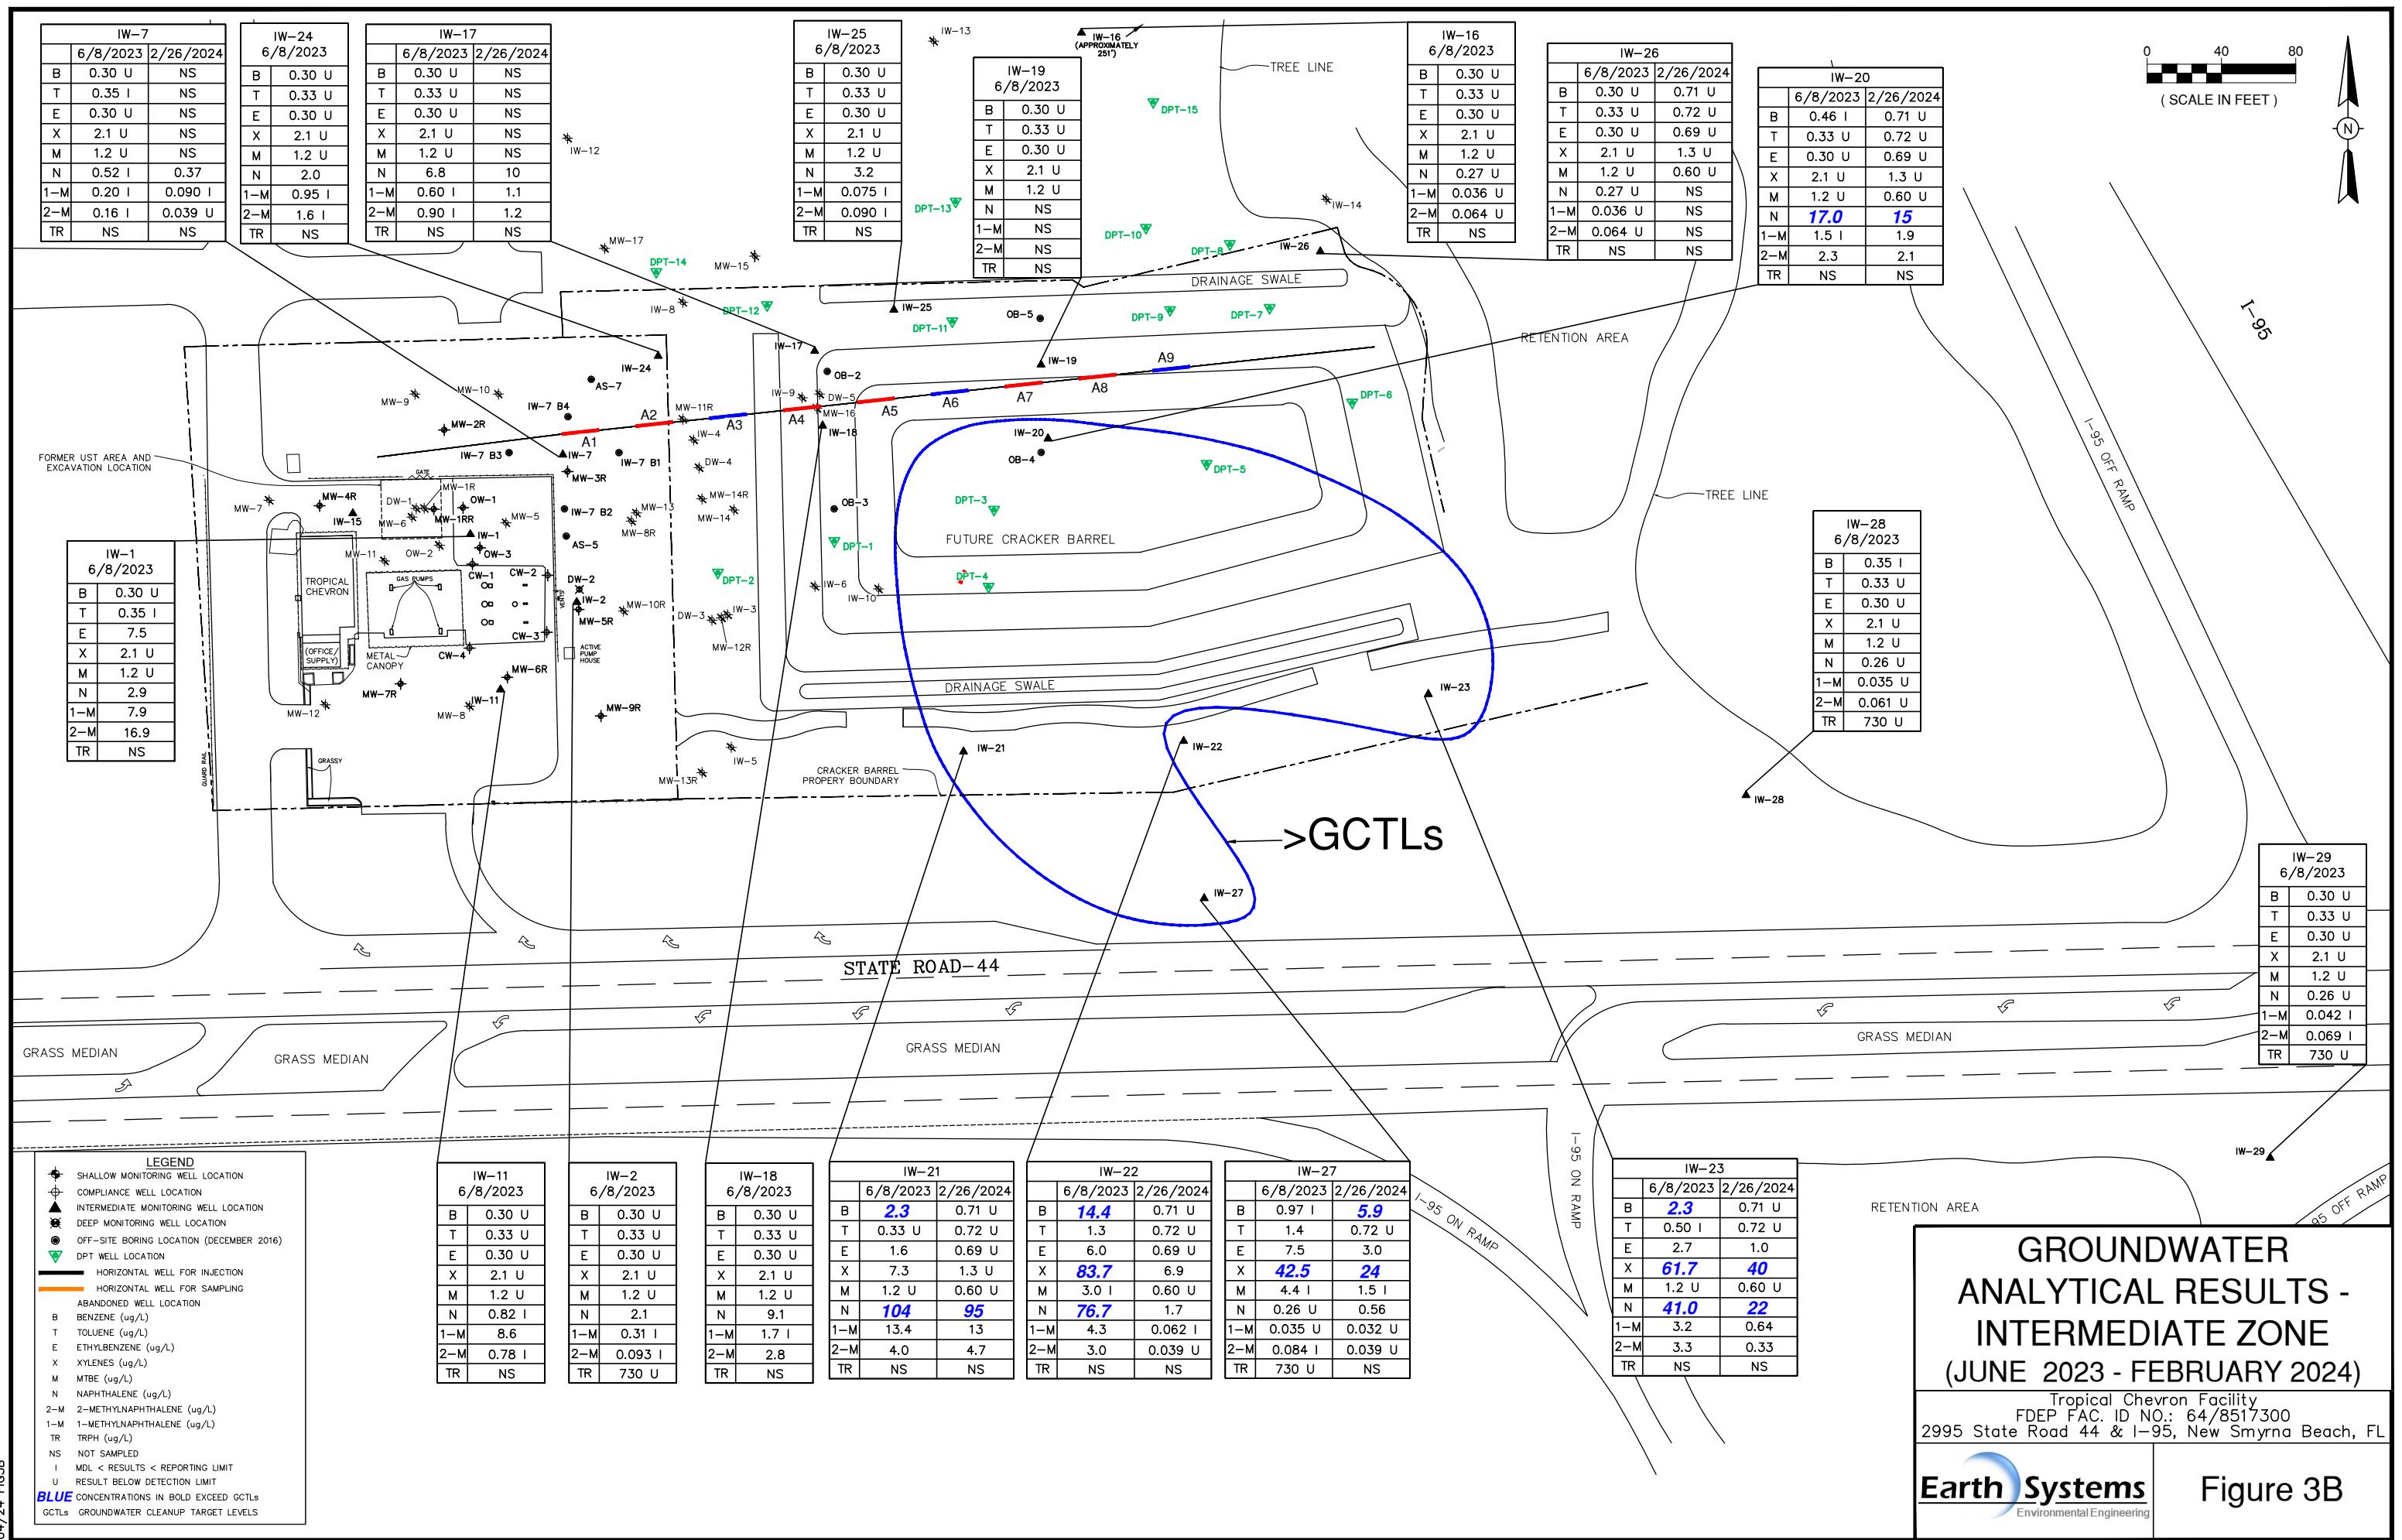

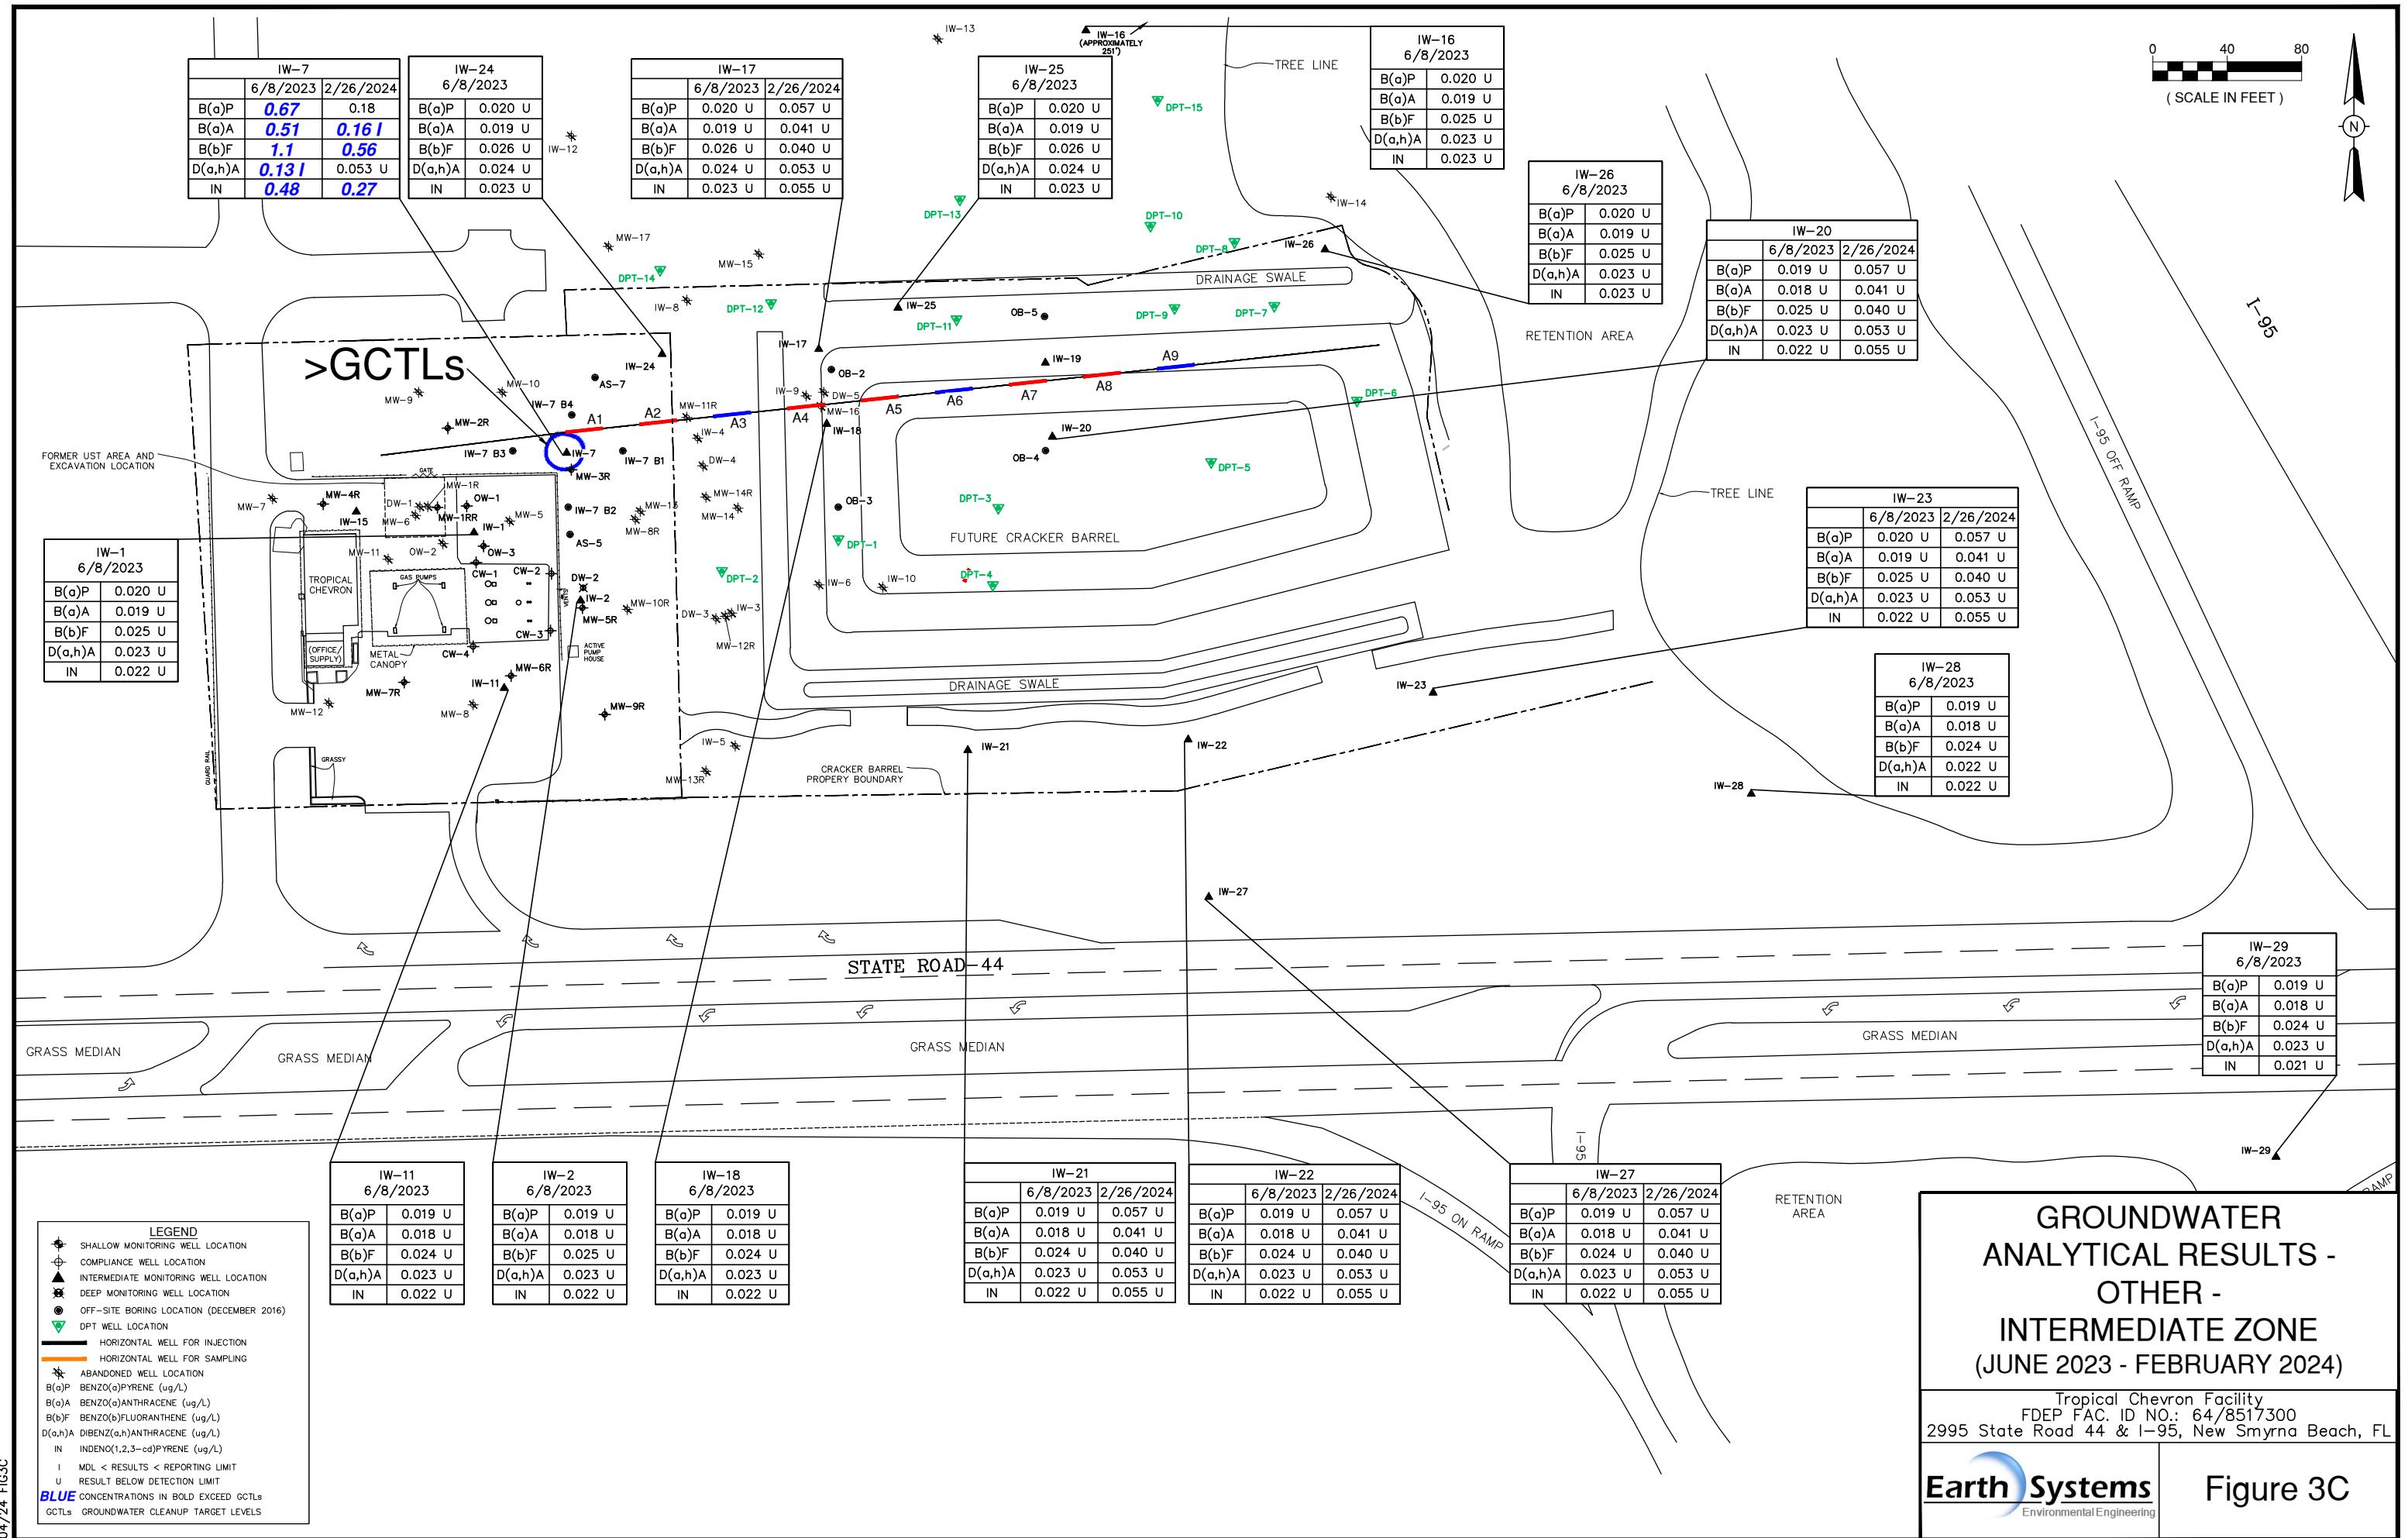

Luke Russell  
Senior Project Manager

Notes:

**Bold** = Above GCTLs      **Bold** = Above NADCs

U = below laboratory detection limit

NCD = no compounds detected

J = Estimated Value

NR = not reported

I = The reported value is between the laboratory method detection limit and the practical quantitation limit

NS = Not Sampled

Blank/-- = No Data

Analytical Results = µg/l

V = Analyte equal to or above detection limit in method blank

\* = Dilution 20

Notes:

**Bold** = Above GCTLs

**Bold** = Above NADCs

NA = Not Available

NS = Not Sampled

GCTLs = Groundwater Cleanup Target Levels specified in Table I of Chapter 62-777, F.A.C.

NADCs = Natural Attenuation Default Source Concentrations specified in Table V of Chapter 62-777, F.A.C.

\*\* = As provided in Chapter 62-550, F.A.C.

a = See the October 12, 2004 "Guidance for the Selection of Analytical Methods and for the Evaluation of Practical Quantitation Limits" to determine how to evaluate data when the CTL is lower than the PQL.

Concentrations in bold are above FDEP Target Levels

## DAILY LOG

Project Name	Tropical Chacoan	Date	2.26.24
FAC ID #	64/8517800	Page	1 of 1
Location	2995 Hwy 44 New Smyrna B.	Prepared by	T. Byrnes
Scope of work	6 w Sampling	Weather Conditions	60
Arrival Time	07:00	Departure Time	11:50

PO / Task #: C31D53 / Task 1

Time	Description of Activities
0430	PREPARE for site, paperwork, calibration of meters.
0530	Driving light duty truck to site
0700	ARRIVE, check in, All wells will be sampled using peristaltic pump, new tubing each well. MW-8 is abandoned
0710	PURGE MW-1RR Sample @736
0750	> " IW-7 " 8865
0820	" IW-17 " 0885
0850	" IW- <del>26</del> 26 " 0905

# ANALYTICAL REPORT

## PREPARED FOR

Attn: Mr. Luke Russell  
Earth Systems, Inc.  
223 N. 12th Avenue North  
Jacksonville Beach, Florida 32250

Generated 3/1/2024 9:58:17 AM

## JOB DESCRIPTION

Tropical Chevron  
2995 Hwy 44 New Smyrna FL

## JOB NUMBER

670-35534-1

# Eurofins Orlando

## Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

## Authorization

### Qualifiers

#### GC/MS VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

#### GC/MS Semi VOA

Qualifier	Qualifier Description
I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
U	Indicates that the compound was analyzed for but not detected.

### Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

**Eurofins Orlando**

## Job Narrative 670-35534-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

### **Receipt**

The samples were received on 2/27/2024 8:00 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 3.9°C.

### **GC/MS VOA**

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

### **GC/MS Semi VOA**

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Eurofins Orlando

## Detection Summary

Client: Earth Systems, Inc.  
Project/Site: Tropical Chevron

Job ID: 670-35534-1  
SDG: 2995 Hwy 44 New Smyrna FL

### **Client Sample ID: IW-26**

**Lab Sample ID: 670-35534-1**

No Detections.

### **Client Sample ID: MW-1RR**

**Lab Sample ID: 670-35534-2**

## Login Sample Receipt Checklist

Client: Earth Systems, Inc.

Job Number: 670-35534-1

SDG Number: 2995 Hwy 44 New Smyrna FL

**Login Number:** 35534

**List Source:** Eurofins Orlando

**List Number:** 1

**Creator:** Clerisier, Meline

Question	Answer	Comment	
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A		1
The cooler's custody seal, if present, is intact.	True		2
Sample custody seals, if present, are intact.	True		3
The cooler or samples do not appear to have been compromised or tampered with.	True		4
Samples were received on ice.	True		5
Cooler Temperature is acceptable.	True		6
Cooler Temperature is recorded.	True		7
COC is present.	True		8
COC is filled out in ink and legible.	True		9
COC is filled out with all pertinent information.	True		10
Is the Field Sampler's name present on COC?	True		11
There are no discrepancies between the containers received and the COC.	True		12
Samples are received within Holding Time (excluding tests with immediate HTs)	True		13
Sample containers have legible labels.	True		14
Containers are not broken or leaking.	True		15
Sample collection date/times are provided.	True		
Appropriate sample containers are used.	True		
Sample bottles are completely filled.	True		
Sample Preservation Verified.	True		
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True		
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True		
Multiphasic samples are not present.	True		
Samples do not require splitting or compositing.	True		
Residual Chlorine Checked.	N/A
